

## **CHAPTER V**

### **CONCLUSION AND SUGGESTION**

This chapter contains about the conclusions and suggestions of research that has been done by the researcher. Which is the conclusion are based on the research analysis and finding of the research. Suggestion is made for further research in the future and those who are interested in this research.

#### **5.1 Conclusion**

Based on the results of research analysis and research finding previous, the researcher found 68 jargon words which used in manufacturing department NPCB Company. After that the researcher concludes the first is about the forms of jargon used that divide become eight forms they are: acronym 34% or 23 data, compounding 25% or 17 data, coinage 22% or 15 data, clipping 9% or 6 data, borrowing 4% or 3 data, back formation 3% or 2 data, conversion 1% or 1 data and the last is blending 1% or 1 data. From the data above it can conclude acronym is the highest and the smallest is conversion and blending that used in Manufacturing Department NPCB Company.

Therefore, based on the result of research the function of jargon is to facilitate employees in remembering the terms that used in production area and it makes the employee easier to communicate with their friend. After that the jargon used to give some of information about the indication of process. Although the employee is difficult to interpret the meaning but the jargon words can help them

easily communicate with each other.

Manufacturing department NPCB Company has two reasons for using of jargon. The first reason in general is jargon used to simplify the operator in communicating while doing the work process. After that the language of jargon used has become the company's determination language and the last is jargon language is used as a medium for conveying information both in the work process information, quality and safety. The second reason in specific is jargon used in the company as confidential information. The confidential information means the jargon words only understood by those who are working in the area process like in rubber area process.

## **5.2 Suggestion**

Finally, after finishing the research, the researcher has some suggestion. The first suggestion is to the reader, the researcher hopes this research can give some information and knowledge about jargon used in Manufacturing Department NPCB Company although they are not inside. After that, the researcher hopes this research can provide a clear picture of the process of forming the jargon and it can provide ideas for the other students to conduct further research especially in sociolinguistic research. This research is still very far from perfection, but the researcher hopes that in the future, this paper can be an inspiration to the readers or to another researcher, especially for readers who want to analyze or research in the field of the process of forming the term like jargon in other fields.
