

CHAPTER V

CONCLUSION AND SUGGESTION

5.1 Conclusions

Based on research analysis and findings which related to the address form uttered by speakers in *Fast and Furious 7* movie, there are two main conclusions can be drawn. First, the types address form found in *Fast and Furious 7* movie are first name (FN), title (T), last name (LN), title plus last name (TLN)/title plus first name (TFN), pet name (PN), and kinship name (KN). The mostly address form occur is the use of first name (FN). It happens because; the speakers are mostly in informal situations than in formal situation.

Second is the reason of speaker choosing address form. There are three reasons found in this movie. First is intimacy. The intimacy refers to relationship among friends, family, and romance relationship. The use of address form by intimacy in this movie found like using first name, pet name, and kinship name. The example of speakers chooses address form because of intimacy such as Roman, buddy, dear, baby, and etc. Second is because of power differential. Power differential will determine different authority. It usually found in formal occasion or institutions. The use of title shows the greater power differential. For example, the words such as sir, boss, captain, is a kind of address form based on power differential. The last is because of politeness. People address other people because of politeness

showing the inequality and unfamiliarity between the speaker and the addressee. It is proved in this research, the use of TLN show the greater of politeness. The address Mr. Shaw and Agent Hobbs is a kind of address form because of politeness.

5.2 Suggestions

After doing analysis, the researcher gives suggestions for the following parties. First is to linguistic students. It is important to give advance study on the use of address terms in certain community, especially English community. It is because English language broadly used in all parts of the world and become an international language so the understanding of English language is needed, especially in an application of address form.

Second is for other researcher. The finding on the use of address form in this research is influenced by context of communication, because different context of communication will get different kinds of address form. For example, people are in formal situation will have different kinds of address form than in informal situation. Besides that, the researcher expects to the other researcher to take different object of the research. For example, in novel, drama, or natural occurring data like in conversation in the school, restaurant, and certain place which show social distance. It is because in the movie, the data which taken based on script not natural occurring data. So, it will be better if the other researcher takes the natural occurring data. Then, the researcher suggest to other researcher to take other theories such as

proposed by Holmes for social dimension of addressing term, Evin and Tripp, and other expert which related of address form.
