

CHAPTER V

CONCLUSION AND SUGGESTION

5.1 Conclusion

Based on the data analysis and findings, the researcher has come to the conclusion that the types of code switching that occurred in Young and Fabulous movie are intra-sentential switching, inter-sentential switching and tag switching. Intra-sentential switching is the type of code switching that mostly occurred, followed by inter-sentential as the second most occurred, and tag switching as the least type of code switching that occurred.

The functions of code switching that occurred in Young and Fabulous movie are referential function, directive function, expressive function, metalinguistic function and phatic function. Referential function is the function of code switching that mostly occurred, then directive function as the second most occurred, followed by expressive function and metalinguistic function, and lastly, phatic function as the least function of code switching that occurred.

5.2 Suggestion

Based on the conclusion of the research, the researcher has some suggestions for future researcher that code switching has become a very common phenomenon that occurred, and thus it is highly recommended for further researcher to analyze deeper about code switching by using the theory from other

experts especially the functions of code switching as not all functions of languages can be covered by only using one theory, for the reason that language is unlimited and infinite.

In addition, living in the country with multiple languages like Indonesia, code switching can be used as an effective tool for people to communicate in order to build and maintain relationship between each other. It is very useful to master a few languages so that they can be used as a strategy of communication in this country that is full of diversity of languages, dialects, and cultures.
